

Multimodal Facility ATS Traffic Projections

Following are the ATS passenger travel demand projections for 2019. Please note:

- 1) The number of passengers in the table below represent projected ons and offs by hour (passengers both boarding and alighting the ATS during the hour);
- 2) The projections include ons/offs for the combined Lots E and F ATS stations (i.e., long term parkers are split between the Lots E and F ATS stations); however, virtually all of the demand in the table below is anticipated to be at the Lot F MMF ATS station during this year. Of course, once the Lot E ATS station is decommissioned (2020-2021 timeframe), all of the demand in the table will occur at the Lot F MMF ATS station; however this demand will be slightly higher due to organic growth between opening year (2019) and 2021.

2019 Projected Combined Ons/Offs Lots E and F ATS Stations	
Hour Ending	ATS Passengers
1	293
2	134
3	76
